Description: Trade Finance consists of all those activities undertaken by banks to facilitate buying and selling of products of their corporate customers. Most often, this involves facilitating transactions with suppliers and customers of bank's clients who are resident in other countries. Hence, trade finance usually deals with import and export of goods, which are carried out by bank's customers. Banks only deal with the handling of paperwork related to the trade and collection / remittance of payments related to the transactions.

Roles and Responsibilities:

- Develop UI Screens for web application using HUBS.
- User requirements analysis for application.
- Handled and resolved all technical glitches.
- Evaluates state of readiness of web application before turning over project to client.
- Performs research on web application design and development requirements.
