## ABOUT ME

I am a passionate UX / UI designer, who always want to make creative, impressive and unique designs. I enjoy working in challenging environment that enhances my creative skills, make me learn new tools and shape my designs following the new trend.

I believe great design requires deep knowledge of your users, their environments and their goals. Also, successful design projects stem from good research communication and keeping the end-user in the forefront.

## EXPERIENCE

### InnovationM Technologies

Aug 2018 - Present

UX / UI Designer

I had started my career as a UX / UI designer in innovationM Mobile and Web Technology Solutions. I single - handedly worked on more than 20 projects in this organization. I was responsible for the complete process ( From research to the deliverable design) of the project there. I had worked on Titan, Tricog, British Council, Dresma, RTITB, DYT, Foxmatrix, Gender Guard, Aakash Numerology, Shiprocket and other client projects.

(January-March 2019)

### Cardionet Tricog

Mobile Application Design  
(October-December 2018)

## ROLE & DETAILS

IELTS Prep and Word power are the official projects of British Council. These are useful for the IELTS preparation and booking online test of the IELTS. I had managed the maintenance of the projects and also designed the new screens of the same.

A check-out portal is designed to smoothen the check-out process of SHOPIFY. This portal allows user to select the delivery location and pay via bank card. I designed the UI for the complete web portal.

DO MY SHOOT is dresma's project, the main motive of this application was to provide professional images for the hotels. Hotel owner has to hire the photographers for the promotion images of the rooms which requires too much money, through this app user can click images from their Mobile Phones and DO MY SHOOT will convert them into professional images. I had designed the UI for the App.

Numerology is a mobile application of AAKASH INSTITUTE, As the name says, the concept of this app is prediction, and astrological stuff. This was developed for both Android and iOS. I had done the UX and UI both in this application.

Gender guard ia a mobile application to report any kind of abuse. User can report against any abuse through the app. The data of the report is directly shared with the lawyers. I had designed the complete user interface for the same.

Foxmatrix is an application to schedule the online interviews with the external interviewers. Although it was released last year, we are still adding new functions in this. I had designed the complete UI for Mobile and Web Screens.

Pronto was the mobile application of Superdry. This app shows your credits that you won via shopping at superdry. I designed the screens for this app.

TITAN-EAP was an internal application for the appraisal program of the employees. The admin can see all the data of the employees regarding the appraisal. Like- Feedbacks, performance reviews, appraisal amount, promotion details.

Cardionet Tricog was a mobile application to communicate with the other hospitals for the cardionet patients. Doctors can see the reports of the patients and can discuss this with other hospitals. I had designed the complete UI design for the same.
