Jenkins   Docker

Projects

Test Automation Framework

Apr 2021 - Current

Senior Lead Architect

Created a Data-driven Test automation framework that counters the hectic process of manually testing the application and similar test cases repeatedly.

This framework is responsible for performing numerous functionalities and task like as follows:

- Picking data from an excel sheet helps in the ease of maintaining the testcases.
- Generate a human-readable report after executing the test cases
- Uploads the test files and reports to AWS S3 bucket
- Establishes database connection through JDBC to verify current running test response with database entries.
- Distributing an email to concerned people only if there are test failures.
- Generate notifications for test execution status over slack
- Initiates the Jenkins pipeline whenever there is a code merged to the master.

Motor Insurance Module Automation

Jan 2020 - Jan 2021
