Occupational Contour

Seeking a professionally challenging and rewarding career by keeping abreast with the software quality analyst in latest technology. Test Engineer with 3+ years in Manual and Automation testing in Web and Mobile application of Opencart e-commerce framework

Proffessional Experience

Company	Webkul Software Pvt. Ltd, Noida
Job Title	Software Test Engineer
Work Duration	July,2018 to Present
Roles and Responsibilities	• Manual and Automation Testing (Selenium) • Web Application Testing • Mobile Application Testing • Write Test Cases and Script • Deploy Software On Docker • API Testing (Postman) • Raised Issues on git • Regression and Retesting • Handle the client tickets
Projects Name	**Project and Description**
1. Opencart Product Exchange	With this help of this module, the customers can create RMA exchange request for replacing the ordered product. The admin can configure various conditions and settings for the RMA exchange request - reasons, order status, payment method, shipping method, etc. The return exchange is managed by separate order ID. **Role:** Software Test Engineer **Responsibilities:** • understand the software requirements to create test cases • Setup the testing environment • Write test case script • Perform the manual testing with test cases in functionality, integration, system testing. • Deploy the module on docker

2. Opencart Warehouse Management system (Web Application and Mobile Application)	This plugin on the Opencart platform will allow the e-Commerce store owners to systemize the orders process in the warehouse. Wherein multiple warehouses can be created and managed by the staff member. **Role:** Software Test Engineer **Responsibility:** • Understand the software requirement • Write the test case sheet • Setup the Environment • Perform Manual testing (functional, integration,system, retesting) • Deploy the module on docker • Manage the issue on git • Deploy the module on docker
3. Excessive Login Attempts	Opencart Excessive Attempt Lock module allows you to temporarily disable login for both customer and the admin. This module protect your customers and admin account from too many failed login attempts to unauthorized access. By enabling an additional security layer to prevent the hackers to abuse your admin and customer logins. **Role:** Software Test Engineer **Responsibility:** • Understand the software requirement • Write the test case sheet • Setup the Environment • Perform Manual testing (functional, integration,system, retesting) • Deploy the module on docker • Manage issue on git
4. Opencart Multivendor Application	Sellers can see their dashboard, order history through the mobile app. Link: https://opencart.webkul.com/Opencart-Marketplace-Mobile-App **Role:** Software Test Engineer **Tool:** Postman and android studio Responsibilities: • Understand the software requirement • Write the test case sheet • Setup the Environment • Perform Manual testing (functional, integration,system, retesting) • API Testing

5. Opencart Delivery Boy (Web Application and Mobile App)	This will allow the admin to manage the orders in a better way and thus enable efficient delivery of the products. The customers can track the delivery boy. **Link:** https://play.google.com/store/apps/details?id=com.deliveryboyoc.android **Role:** Software Test Engineer Responsibility: • Understand the software requirement • Write the test case sheet • Setup the Environment • Perform Manual testing (functional, integration,system, retesting) • API Testing
